BestServe

Release Notes

Web application and Android app v1.24 · 1 November 2026

Item	Details
Web application	Live at bestserve.co.in
Android app	Version 1.24 (file: bestserve-v1.24.apk)
In this release	Site Audits, customer agreements, One-time / AMC on converted customers, Employee Feedback for the Managing Director, a fresh look for leads and tasks, and a safer booking form.

1. Highlights

- **Site Audits (new, app and web).** Inspect a customer site area by area with photos and voice notes in any language, mark up photos, set risks and deadlines, get sign-off and share a PDF report on WhatsApp or email - all from the phone. See section 2.
- **Customer agreements (new).** Create, edit and duplicate agreements from a quotation, download them as PDF, and keep one final signed copy per customer.
- **One-time or AMC.** Asked when a lead is converted to a customer; shown as a tag on leads and used to split the team targets.
- **Employee Feedback (new, Managing Director only).** Private notes and 1-5 star ratings for each employee, with a report per person.
- **Fresh design** for the lead list, lead details, Manage lead, Task Management home and task cards.
- **Booking form (web):** the service address is now required, and a booking can no longer be created twice by double-clicking.

2. Site Audits (new)

Site Audits lets a supervisor inspect a customer site area by area, capture evidence (photos and voice), agree the risks and actions, get sign-off and hand over a professional PDF report - all from the Android app. The same audit is available on the web, so a draft started on the phone can be finished on the web and back.

On the app it is the **Audits** tab for supervisors. On the web it is **Site Audits** in the admin sidebar.

2.1 Audits home

- A summary of the supervisor's audits: drafts to continue, scheduled audits (audit date after today) and recently submitted audits.
- A **high-risk alert** at the top shows how many High or Critical findings are due this week; tapping it lists those audits.
- Search by customer or site, and filter chips to narrow the list.
- Submitted audits have a one-tap **PDF** download.

2.2 Starting an audit

- Choose the **customer and site**, the audit date, one or more **audit types** (for example General Pest Control and Rodent; "Other" lets you type your own) and the site contact who walks with you.
- The signed-in supervisor is recorded as the auditor.
- The audit details can be edited later (except the customer and site).

2.3 Two ways to record the areas

A. Site walkthrough (fastest)

- Record **one voice note for the whole walk** around the site.
- The app lists every area it heard, each with its findings, the corrective and preventive actions, and a **suggested risk level**. A long walk can take about a minute to process.
- The supervisor checks and edits each area card, adds photos to each area, and saves them all at once.

B. Area by area (most detailed) - three short steps for each area:

- **Photos:** take or pick the evidence photos.
- **One recording:** describe the area, the problem, what you observed and both actions. The app fills in the area name, zone, problem, observation, actions and a suggested risk from what you said.
- **Review and details:** everything is editable before saving - category, target pests (for example Cockroaches, Rodents, Lizards), risk level and the **Fix within** days.
- **Save Draft** keeps what is entered; **Save & Finish** or **Save & New Area** marks the area complete. If something is missing, the app says exactly what to add.

2.4 Risk levels and deadlines

- Each finding has a risk level: **Low, Medium, High or Critical**.
- **Fix within** is filled from the recording when it was said, or from the risk level; the supervisor confirms or changes it (Other lets you type the number of days).
- The Audit Areas screen shows every area with its status, risk and first photo, and highlights the next area to start or continue.

2.5 Photos

- Photos upload straight from the phone and are resized to keep uploads fast and light on data and battery. A failed upload can be retried with a tap without creating duplicates.
- **Mark the photo:** draw circles, arrows, pen lines and text labels to point out the problem. The original photo is never changed - clearing the marks returns to it.
- Tap a photo for View, Mark, Download (saved to the phone's Pictures/BestServe) or Delete.

2.6 Voice in any language

- Speak in **Kannada, Hindi, English or a mix** - the app recognises the language by itself.
- Voice notes are translated to English for the report; the supervisor checks each one before the audit can be submitted.

2.7 Review, sign-off and submit

- One page shows a **checklist** of anything still missing (unfinished areas, unchecked voice notes and so on), each with a **Fix** link that goes straight to it.

- **Sign-off:** who received the report (the supervisor by default, can be changed), the **next audit date** (quick picks: 2 weeks, 1 month, 3 months) and remarks.
- Choose the **optional report pages**: Risk chain, Risk by zone, This week's priority and IPM cycle.
- **Submit** locks the audit. A submitted audit can be viewed (areas, photos, findings and actions) but not changed. The next audit date appears as a scheduled audit on the home screen.

2.8 The PDF report

- Made automatically a few seconds after Submit, named Customer-AuditReport-Year.pdf (later versions get -v2 and so on).
- **Download** saves it to the phone's Downloads/BestServe folder; **Share** opens WhatsApp and email first; **Open** shows it in the phone's PDF viewer.
- Before submitting, **View report** shows a draft preview of what has been entered so far, clearly marked DRAFT.

3. Commercial Leads

3.1 Agreements

- An **Agreements** button on the lead, next to the next-step actions.
- The agreement form has the customer signatory name, designation and date, simple drop-downs, and an editable yearly amount (filled in from the quotation).
- **Edit** and **Duplicate** an agreement, the same way as quotations. PDFs are named automatically: Client name - Agreement - Year.
- Creating a new agreement cancels the older ones, so only the newest is **Active**.
- **Final signed agreement:** one per customer. Upload it from the web or the app; uploading again replaces it. It is tagged **LATEST**.
- Every agreement card has **View** and **Download**.
- Sales executives do not see or change agreements.

3.2 One-time or AMC

- Asked at **Convert to customer** (app and web), instead of when the quotation is saved.
- Managers can set it for customers converted before this release.
- An **AMC** or **One-time** tag appears on the lead list, Manage lead and Lead details.
- Team targets have **All / One-time / AMC** tabs.

3.3 Design updates (app)

- **Lead list cards:** a cleaner card with the customer initials, the date, the sales person's name ("You" in blue for your own leads) and a status pill.
- **Lead details:** the Site visits section folds closed by default. Manage lead is a clear blue bar, sized properly next to Follow-up.
- **Manage lead:** Call and WhatsApp are round buttons in the header, and the activity timeline is grouped by day.
- **Quotations** have their own page, like Agreements.
- Status pills and Home section headings have a modern, consistent look.

4. Task Management

4.1 Employee Feedback (Managing Director only)

- The Managing Director picks an employee from their team, types a feedback type (earlier types are suggested), writes the feedback and gives 1 to 5 stars.
- Only the Managing Director can see, edit or delete feedback - not the Personal Assistant, managers, admin or the employee.
- Feedback is stored against the employee, ready to be linked to HRMS later.
- **Web:** Task Management > Feedback - the team with average stars, and a report per employee (stars by type, every entry) that can be printed or saved as PDF.
- **App:** a **Feedback** tile on the Task Management home (in place of In Progress, for the Managing Director only), with an employee drop-down and star filters.

4.2 Design updates (app)

- Home headings match the Leads app (Recent Tasks, Quick Actions).
- Task cards are a little larger and show **Created by** - "You" in blue, or the creator's name - and who the task is for.
- A new **Task created** screen with the task details and quick buttons: View task, Create another, Back to Home.

5. Web application

- **Booking form:** the service address is now **required** (admin, supervisor and client bookings). The Brigade booking form is unchanged.
- **Booking form:** the Create booking button shows "Creating..." and cannot be pressed again while a booking is being saved, so double clicks no longer create duplicate bookings.
- **Booking form:** "Every X days / weeks / months" must be 1 or more.
- **Booking form:** the "Still needed" panel now lists the service address when it is empty.
- **Admin panel:** the old Tasks item is removed from the sidebar. Task Management is not affected.

6. Android app performance

- Built for release with code and resource shrinking and the Hermes engine, for faster start-up and lower memory use.
- Background refreshes only run while the app is open on screen; location is used briefly when needed and then switched off - no constant tracking.
